

## High temperature Comfortline heater construction

- Locking mount brackets and (option) wall ceiling angle bracket.
- Optional tilt bracket.
- Strong steel chassis provides rigid platform for the heating elements.
- High grade Anticor treated steel body for harsh environments.
- Uniquely tapered lamella enhances linearity of heat distribution across their entire width and a high emissivity silicated coating for optimised heat transfer.
- Large terminal block cavity for easy wiring.
- Elements may be individually wired.

- Unique side wall insulation (12.5mm)
- Unrivalled rear wall insulation (45mm)

The thermal insulation comprises of ceramic wool which offers improved insulation properties to fibre-glass based insulation materials.
